

Product Photo Upload Guide

How to add your own product images to the website

Version 1.0 · July 2026 · For website owner use

Overview

This guide explains how to replace the placeholder emoji icons on the Cozy Home website with your own real product photos. No coding experience is required — just follow the steps in order and your photos will appear on the website automatically.

Website file:	CozyHome_Shop.html
Images folder:	images/ (you will create this)
Total photos needed:	16 photos (one per product)

Part 1 — Prepare Your Product Photos

1.1 Photo Requirements

Setting	Requirement	Why
Format	JPG or PNG	Best web compatibility
Size	800 x 800 px minimum	Looks sharp on all screens
Ratio	1:1 Square (recommended)	Fits the product card perfectly
File size	Under 500 KB per image	Page loads fast on mobile
Background	White or light grey	Clean, professional look
Lighting	Bright, even, no harsh shadows	Product looks appealing

1.2 Compress Your Images (Free Tool)

Before uploading, compress your images to keep the website fast. Use this free website — no account needed:

<https://squoosh.app> or <https://tinypng.com>

Upload your photo, compress it, then download. Aim for under 500KB per image.

1.3 Rename Your Files Correctly

Each product needs a specific filename. Rename your photos EXACTLY as shown in the table below — including the number and lowercase letters. Do not use spaces or capital letters.

■ ■ Wrong filename = image will NOT appear on website. Double-check every filename.

ID	Product Name	Image Filename	Category
1	Egyptian Cotton Sheet Set	product_1.jpg	sheets
2	Bamboo Sheet Set	product_2.jpg	sheets
3	Fitted Sheet — King	product_3.jpg	sheets
4	Luxury Sherpa Blanket	product_4.jpg	blankets
5	Waffle Knit Throw	product_5.jpg	blankets
6	Weighted Blanket 7kg	product_6.jpg	blankets
7	Memory Foam Pillow	product_7.jpg	pillows
8	Pillowcase Set (2 pack)	product_8.jpg	pillows
9	Duck Down Pillow	product_9.jpg	pillows
10	All-Season Quilt 400GSM	product_10.jpg	quilts
11	Winter Goose Down Doona	product_11.jpg	quilts
12	Summer Bamboo Quilt	product_12.jpg	quilts
13	Bath Towel Set (4 pack)	product_13.jpg	towels
14	Luxury Hand Towel Set	product_14.jpg	towels
15	Beach Towel — Oversized	product_15.jpg	towels
16	Bed Runner and Cushion Set	product_16.jpg	sheets

Part 2 — Upload Photos to the Website

2.1 Create the Images Folder

Step 1	Find your website file	Locate <code>CozyHome_Shop.html</code> — it is in your AIStudio folder on the Desktop
Step 2	Create a new folder	In the SAME folder as the HTML file, right-click → New → Folder. Name it exactly: <code>images</code> (all lowercase, no spaces)
Step 3	Move your photos in	Copy all 16 renamed product photos (<code>product_1.jpg</code> ... <code>product_16.jpg</code>) into the <code>images</code> folder

Your folder structure should look like this:

```
AISTudio/  
CozyHome_Shop.html  
images/  
product_1.jpg  
product_2.jpg  
product_3.jpg  
... (up to product_16.jpg)
```

2.2 Edit the Website HTML File

Now update the HTML to use your real images instead of the emoji placeholders.

Step 1	Open the HTML in Notepad	Right-click <code>CozyHome_Shop.html</code> → Open with → Notepad (or Notepad++ recommended — free at notepad-plus-plus.org)
Step 2	Open Find and Replace	Press Ctrl + H to open the Find and Replace dialog
Step 3	Find the emoji placeholder lines	In the Find box, search for: <code>class="product-img"</code> to jump to each product image area
Step 4	Replace each emoji with an image tag	For product 1, find this line: <code><div class="product-img">emoji</div></code> Replace it with: <code><div class="product-img"></div></code>
Step 5	Repeat for all 16 products	Change the number each time: <code>product_1.jpg</code> for product 1, <code>product_2.jpg</code> for product 2, and so on up to <code>product_16.jpg</code>

Step 6	Save the file	Press Ctrl + S to save. Then open the HTML file in your browser by double-clicking it — check all 16 images appear correctly before pushing to GitHub
--------	---------------	--

■ Tip: Notepad++ (free at notepad-plus-plus.org) is much easier than regular Notepad — it highlights HTML code in different colours and makes editing much more readable.

Part 3 — Push Updated Files to GitHub

After adding your images and updating the HTML, push everything to GitHub so the live website is updated with your new photos.

Step 1	Open Command Prompt	Press Windows key + R , type cmd , press Enter
Step 2	Navigate to your project folder	Type this command and press Enter: <code>cd C:\Users\liangho\Desktop\AIStudio</code>
Step 3	Add all changed files	Type: <code>git add .</code> then press Enter This adds the updated HTML AND the entire images/ folder automatically
Step 4	Commit your changes	Type: <code>git commit -m "Add product photos"</code> then press Enter
Step 5	Push to GitHub	Type: <code>git push origin main</code> then press Enter. Wait for upload to complete — larger images may take 1–2 minutes
Step 6	Verify on GitHub	Open https://github.com/Yoghurt16/AIStudio in your browser. You should see the images/ folder has appeared in the repository.

Part 4 — Troubleshooting

Problem	Likely Cause	Solution
Image does not appear, shows broken icon	Wrong filename or wrong folder location	Check: filename is exactly product_1.jpg (not Product_1.JPG). Check images/ folder is next to the HTML file.
Image appears but is stretched or cropped strangely	Photo is not square ratio	Crop your photo to 1:1 square before uploading. Use Windows Photos app or any editor.
Website loads very slowly on mobile	Image file sizes are too large	Compress all images at tinypng.com or squoosh.app. Keep each file under 500KB.
Git push fails with authentication error	GitHub token has expired	Ask Orcha to re-authenticate GitHub, or generate a new Personal Access Token on github.com.
Cannot find the right line in the HTML file	Searching wrong text	Use Ctrl+F in Notepad and search for the product name (e.g. Egyptian Cotton) to find the right section.
All images show but one is wrong product	Wrong number in the filename or HTML	Check the product ID table in Part 1. Make sure product_3.jpg matches product ID 3 in the HTML.

Quick Reference Checklist

- All 16 photos taken and looking great
 - Photos cropped to square (1:1 ratio)
 - Photos compressed to under 500KB each (squoosh.app or tinypng.com)
 - Files renamed correctly: product_1.jpg through product_16.jpg
 - 'images' folder created next to CozyHome_Shop.html
 - All 16 photos moved into the images/ folder
 - HTML file updated — emoji placeholders replaced with real image tags
 - Tested in browser locally — all 16 images show correctly
 - git add . then git commit then git push to GitHub
 - Checked GitHub repo online — images/ folder visible in repository
-

Need help? Ask Orcha — just provide your photo files and Orcha can handle the HTML edits and GitHub push automatically.
